

The Guardian Mobile Inspection System (GMIS): A mobile, web-based solution for all your fleet maintenance needs.

The GMIS is a highly intuitive mobile application that allows end-users to effectively manage the maintenance cycle of their fleet of vehicles. Accessible anywhere with an internet connection and compatible with legacy systems that support its XML platform, the GMIS is proactive solution that saves money and time for any organization that conducts periodical inspection and maintenance checks on their vehicles.

- Mobile and ergonomically designed
- User-friendly
- Internet enabled
- Compatible with existing systems
- Manages data in real time

The GMIS cuts on maintenance costs and adds real value to your organization!

Export and import data to and from your existing applications!

Inspect, track, and document critical components of your vehicles while reducing your maintenance costs!
